

## **MG TD/TF/YA/YB OIL FILTER ADAPTOR FITTING** **INSTRUCTIONS**

Fitting a Flexolite oil filter adaptor is straight forward, but can be messy, so be prepared.

Each kit consists of:

- 1 x large rubber seal
- Large alloy adaptor plate
- 1 x hollow locating bolt
- 1 x copper washer
- Oil filter

Remove the old seal which sits in the groove in the filter head. Replace with the new seal supplied in the kit. Place the alloy adaptor plate in position in the filter head and insert the hollow locating bolt (we recommend Loctite) and copper washer. Tighten the bolt using a 1" AF socket. You are now ready to fit a spin-on filter.

Use a Crosland 357 or similar high quality oil filter with a 3/4UNF fitting on your new adaptor. Remember to fill it with oil before fitting and change it every 4,000 miles (or sooner if required).
